

Professional Summary

Software engineer graduating May 2026 with 2 years of experience **building LLM-powered agents, production AI APIs, and MLOps pipelines** in Python. Experienced in **end-to-end AI delivery** — from **data preparation and model experimentation** to **API integration, deployment, and monitoring** in cloud environments. Strong in FastAPI, React, AWS, and Docker.

Experience

KPIT Technologies Limited <i>Software Engineer Intern</i>	June 2024 – August 2024 June 2025 – August 2025 Novi, Michigan
Automated the end-to-end data capture and validation pipeline in Python on the middleware team, cutting acquisition latency by 35% and eliminating the batched reporting bottleneck that delayed hardware diagnostics. Architected a CI/CD and MLOps pipeline on GitHub Actions with branch protection, automated pytest testing, and peer code reviews — cutting data integrity errors by 90% across 3 active pipelines while delivering in Agile sprints. Delivered 3 Python automation tools integrating SQL databases and Excel data sources — documenting APIs and deployment processes for the engineering team, recognized by the client for significant engineering impact.	
The University of Toledo: College of Engineering <i>IT System Administrator Level 2</i>	October 2023 – Present Toledo, Ohio
Automated log monitoring, security audits, and endpoint provisioning using Python and PowerShell — troubleshooting and resolving system failures and maintaining 99.9% uptime on departmental cloud servers. Streamlined endpoint management through Microsoft Intune and Active Directory — collaborating cross-functionally with faculty and students to document solutions and optimize workflows.	
Softage Information Technology <i>AI Engineer Intern</i>	May 2023 – August 2023 Gurugram, India
Developed a human-in-the-loop LLM fine-tuning platform in Django and SQL where employees answered database-driven prompts to preprocess and label training data, feeding directly into enterprise LLM workflows. Reduced model retraining cycle time by 20% across 3 enterprise clients by replacing manual data handoffs with an automated MLOps ingestion pipeline, letting data teams pull clean structured datasets independently each cycle.	

Projects

TwinMind Copilot — Real-Time AI Meeting Assistant Next.js, TypeScript	December 2025
Designed and built a production LLM-backed API service with a FastAPI backend, FAISS vector search, and React dashboard — achieving 500ms retrieval with full REST API documentation and runbooks for the engineering team. Improved agent accuracy by ~40% by iterating on prompt engineering and evaluation strategies for multi-step document retrieval — implementing responsible AI guardrails and documenting all prompt designs as implementation-ready runbooks.	
Docling: LLM-Powered AI Agent FastAPI, React, LangChain, OpenAI, FAISS	December 2025
Built a real-time NLP-powered meeting copilot with live transcription and streaming AI suggestions — engineered a structured reasoning prompt detecting conversation phase and moment type to surface 3 varied suggestions every 30 seconds. Integrated Groq Whisper Large V3 for transcription and GPT-OSS 120B for LLM inference, conducted competitive research on 5 systematic weaknesses and built a prompt architecture with built-in output safety controls that directly addresses each one.	
Moodify – AI Mood-Based Music Player React, Node.js, PostgreSQL, OpenCV, AWS	May 2025
Engineered a full-stack AI system where an OpenCV model detects facial expressions in real time, routes outputs through an async event-driven pipeline, and serves predictions with sub-second ML inference on AWS EC2 — maintaining 99.9% uptime across 20+ beta testers.	

Education

The University of Toledo: College of Engineering <i>Bachelor of Science: Computer Science and Engineering</i>	Anticipated Graduation: May 2026 <i>Cum laude</i>
---	--

Technical Skills

- AI & ML:** LLM Agents, **NLP**, Prompt Engineering, **RAG**, **Responsible AI**, MLOps, LangChain, OpenAI API, FAISS, **Embedding-Based Search**, Human-in-the-Loop Systems, OpenCV, Computer Vision
- Programming Languages:** Python (Pandas, NumPy, Scapy), SQL (MySQL, PostgreSQL), JavaScript, TypeScript, Node.js, Java, C#
- Frameworks:** FastAPI, Django, React, Next.js, REST APIs
- Cloud & DevOps:** AWS (S3, EC2, Lambda), Azure, CI/CD, Docker, GitHub Actions, Microsoft Intune
- Tools:** Git, GitHub, Jira, Agile, pytest, Windsurf, MongoDB, SSMS, MySQL, PowerShell
